1

## ECO-FRIENDLY

We do not use drywall, paint, or other artificial materials. Only marble, valuable wood, and stone are durable, environmentally friendly materials that do not require operating costs.

2

## ENERGY EFFICIENT

We use alternative energy technologies; our previous project PARQ UBUD already has solar panels that generate 1 MW of energy, which covers the daily needs of the complex. The same batteries will be installed in Ocean City.

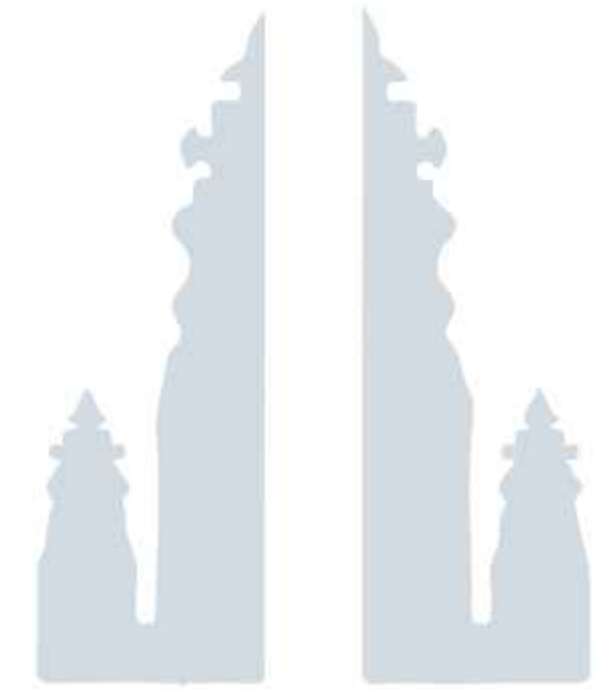

Generating 1 mW of energy using coal releases 500 kg of carbon dioxide, soot, carbon monoxide, oxides of sulphur, phosphorus, nitrogen and heavy metals into the air. Solar panels avoid this and significantly reduce the environmental impact.

# ECO COMPLEX

We specialize in the management and construction of premium segment facilities and bring to life the most daring ideas. You get modern and functional spaces for living and investing.

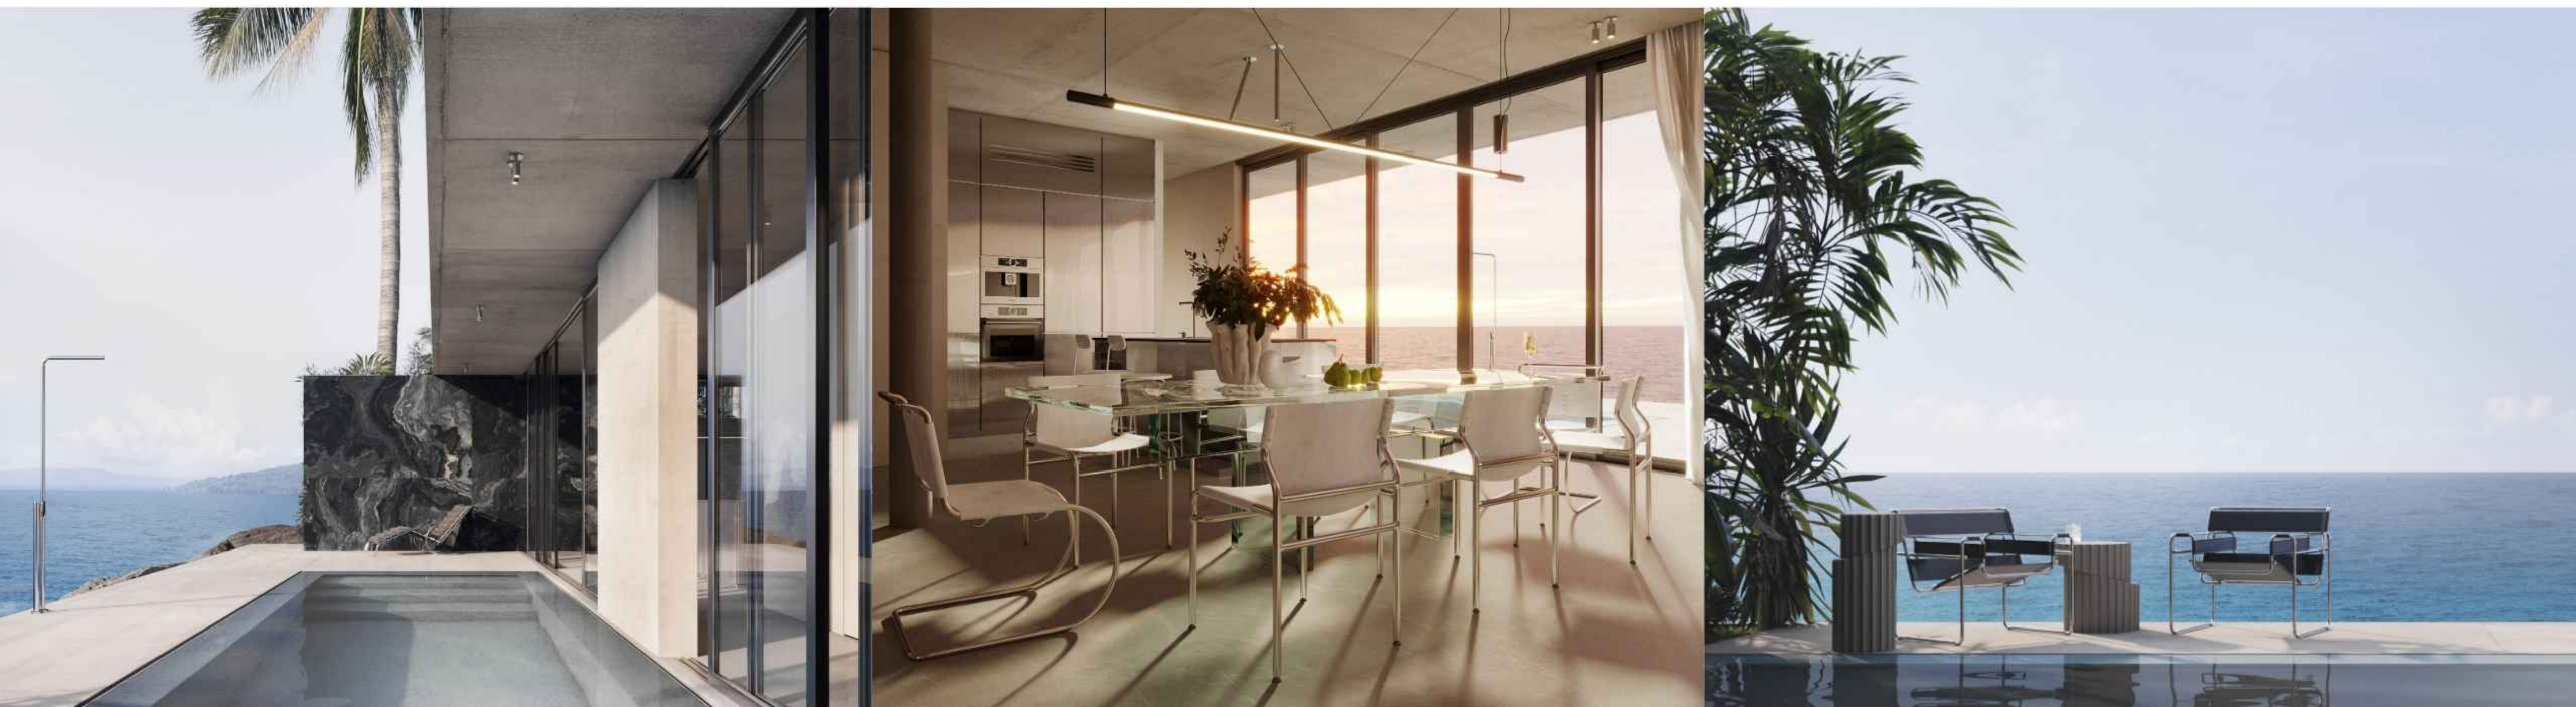

Ocean City is located on the first coastline of the Candi Dasa area. There is no active nightlife or large tourist flow here. Only **an atmosphere of calm and complete unity with nature**. On one side, the complex is surrounded by ocean waters, on the other, by dense palm groves with Mount Agung at the top. This is one of the few places where you can still get acquainted with the traditions, customs, and culture of the local population.
